The vector is delivered using a delivery system. The delivery of the vector results in substantial elimination of symptoms of the composition is useful for treating various diseases with an autoimmune component such as multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus, insulin-dependent diabetes mellitus, sarcoidosis and psoriasis, and also for assaying the expression of a gene in a cell. The vector is further useful for screening of the effect of test compounds on cytokine (e.g. TGF-beta) expression of transfected cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM88642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathles and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activiny, inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for recentor activity cancer diagnosis and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-JAN-2000;

                                                                                                                     The gene product is known to stimulate cell proliferation and inhibit anchorage-dependent growth of a variety of human cancer cell lines, it is esp. useful in treatment of burns and the promotion of surface and internal wound healing. TGF-beta may be expressed from a transformed CHO cell line.

                                                                                                                                                                                                                                                                                                                        AAR13813 standard; Protein;
                                                                                                                                                                                                                                                           20-NOV-1991
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cleavage of the precursor gives rise to the mature TGF-beta monomer. The sequence for human TGF-beta was determined by direct amino acid sequence analysis and by deduction from the TGF-beta cDNA. It is capable of inducing EGF-potentiated anchorage-independent growth of target cell lines, and/or growth inhibition of neoplastic cell lines. can be used for treating wounds, eg burns or epidermal ulcers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pre-TGF-beta-1 is a polypeptide of 390 amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid encoding transforming growth factor-beta - cloned into expression vectors for expression in eukaryotic host cells for therapeutic use

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents human transforming growth factor-beta 1 (TGF-beta 1). This sequence and the sequence for human TGF-beta 3 (see ARR73598) are claimed within the scope of the invention. The invention is a composition consisting of a TGF-beta protein and an osteogenic cell source (OCS) formulated in an acceptable carrier other than a bone morphogenic cofactor. This composition can be used for the restoration of bone deficiency. This provides for the generation of mature bone only where it is required, without the inclusion of a specific bone-inducing cofactor. This method can be used with any of the 5 human TGF-beta's or with TGF-beta from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 3; Column 15-18; 19pp; English

                                                                                                                                                                                  The pre-transforming growth factor (TGF) beta 1 protein is encoded by AAT15720. The mature TGF beta 1 monomer is cleaved from the precursor at the Arg-Arg dipeptide immediately preceding the mature TGF-beta 1 NH2-terminus. It does not contain a recognisable N-terminal signal peptide typical of most secreted proteins. The pre-TGF beta 1 contains several pairs of basic residues which could undergo post-translational cleavage and give rise to separate polypeptide entities. The precursor contains 3 potential N-glycosylation sites, nor of which are localised in the mature TGF beta 1. This is useful in
                                                                                                                                    Sequence

from insufficient insulin production, involving contacting the subject with a transforming growth factor beta (TGF-beta) therapeutic. TGF-beta polypeptides can be used for treating a subject with a disorder resulting from insufficient insulin production, e.g. type I diabetes mellitus, and for inducing outgrowth of pancreatic cells associated with pancreatic duct tissue within a subject. A composition comprising a TGF-beta protein may be useful in wound healing and treatment of neurological conditions

derived from acute, subacute or chronic injury to

the nervous

system,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of the interaction between latency associated peptide (LAP) of transforming growth factor-betal (TGF-betal) and integrin alphavbeta3. The method is useful for identifying a modulator of the interaction between LAP and integrin alphavbeta3. The method is useful for immunomodulation, in the treatment of inflammatory disease, fibrotic disease, cancer, diabetic retinopathy, bone resorption or osteoporosis, and for preventing apoptosis administering the modulator to the host. The modulator (inhibitor of the interaction between LAP-betal and integrin alphavbeta3) is useful in the manufacture of a medicament for LAP-betal and integrin alphavbeta3 ) is useful in the manufacture of medicament for preventing apoptosis. The modulator is useful in the manufacture of treating a inflammatory or fibrotic disease such as chronic obstructive pulmonary disorder, rheumatoid arthritis, psoriasis, restenosis, liver fibrosis and asthma. The present sequence is

04-AUG-1989;
                                                    cDNA sequences were determined for human pre-TGF-beta-1 (AAQ56923), pig TGF-beta-3 (AAQ56925) and human TGF-beta-3 (AAQ56926), and the corresponding amino acid sequences were determined (AAR46227-29, respectively). A genomic fragment corresponding to a human TGF-beta-1 exon (AAQ56924) was also isolated and its amino acid sequence determined (AAR46239). The sequences have been used in the construction of vectors for the expression of recombinant TGF-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cleavage-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human pre-TGF-beta-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-JUL-1994

TGF-beta 1 or 2 (AAR83055) or their active fragments (esp. derived from the carboxy-terminal 112 amino acids), can be used in the treatment of hypotension, such as that associated with severe inflammation or septic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the amino acid sequence of human transforming growth factor-beta 1 precursor (preTGF-beta 1). It was deduced from a preTGF-beta 1 cDNA sequence (see AAN2293). The invention relates to the recombinant production of TGF-beta. Biologically active TGF-beta is defined as being capable of inducing EGF-potentiated anchorage independent growth of target cell lines and/or growth inhibition of neoplastic cell lines. Nucleic acids encoding TGF-beta have been isolated and cloned into vectors which are recovered from transformed cells is used in known therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cleavage-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding transforming growth factor-beta useful for analysis to perform manipulations recombinant production of the protein

                                                                                  a growth factor, an inhibitor agent, i.e. a protease. The inhibitor agent inhibits the action of at least one specific adverse protein, i.e. a protease, that is upregulated in a damaged tissue such as a wound environment. Growth factors which are included in the composition of the invention are platelet-derived growth factor (PDGF), fibroblast growth factor (FGF), connective tissue derived growth factor (CTGF), keratinocyte-derived growth factor (KGF), transforming growth factor (FGF-beta), granulocyte macrophage colony stimulating factor (GM-CSF), epidermal growth factor (FGF), vascular endothelial growth factor (VGGF), and chrysalin. Inhibitors which are included in the composition of the invention include inhibitors of urckinase type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            platelet-derived growth factor; PDGF; fibroblast growth factor; PGF; connective tissue derived growth factor; CTGF; chrysalin; VEGF; keratinocyte-derived growth factor; KGF, epidermal growth factor; EGF; transforming growth factor-beta; TGF-beta; matrix metalloproteinase; MMP; granulocyte macrophage colony stimulating factor; GM-CSF; uPA; vascular endothelial growth factor; urokinase plasminogen activator;

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
